

## Special update for Champion 4500.

If the fuel selector knob on the front of your generator is labeled “AUTO OFF, RUN, START” then install as shown in the install video. If the fuel selector knob on the front of your generator is labeled “OFF, RUN, START” then follow these instructions before you install the kit. Start your generator and warm it up. After it is warmed up slowly start turning the knob to the off position until the generator suddenly shuts off. Use a black magic marker to mark the spot just before it shuts off and label it “Auto Off”. This new position is where you will put the knob to run your generator from the remote tank.
